eyesite™

The vote is in and the eyes have it.

Functional focal adjustment.

On-center mounting for straight forward or straight back movement enables the arm to glide across a 13" range of focal depth adjustment while maintaining monitor alignment. And it tucks flat neatly against a panel or wall so valuable work space is re-claimed right where it's most needed: directly in front of you!

For a better day at work: **details** A Steelcase Company

eyesite™

What won't be turning heads around the office.

You've positioned your monitors in a particular way for a very good reason: it suits the way you work: the way you need to view information on the screen. So let's say you turn the screen to share work with others – or to shield "non-work" from others – you still want the screen alignment to remain unchanged.

You want "movement as one."

eyesite™

So many ways to work for so many different workers.

In a world of multiple screens, a world in which multi-taskers must manage more information in less time, Eyesite offers numerous options in a scalable system that easily adapts to any application.

eyesite™

The research road to Eyesite.

Extensive primary and secondary research drove the development of Eyesite. Multiple prototypes and designs resulted from research-driven insights. Relentless refinement from continuous end-user validation led to this elegantly functional design.
